CS 214: Data Structures and Algorithms

Halvorsen University, Fall 2026. Prof. Imani Okoro

CS 214, 1. Prerequisites

Students must have earned a grade of C or better in CS 112 (Programming Fundamentals). MATH 140 (Discrete Mathematics) must be taken before or alongside CS 214. There is no instructor override for CS 112.

CS 214, 2. Grading Policy

Final grades are weighted as follows: programming projects 40%, midterm exam 20%, final exam 25%, weekly labs 10%, and participation 5%. A final weighted score of 90% or higher earns an A; 80% to 89.99% earns a B.

CS 214, 3. Late Work Policy

Programming projects lose 10% of their score for each day they are late, and are not accepted more than three days after the deadline. Each student has two grace tokens per semester; a token extends one project deadline by 48 hours with no penalty. Labs cannot be submitted late.

CS 214, 4. Attendance Policy

Lecture attendance is encouraged but not graded. Lab sessions are mandatory: after three unexcused lab absences, the final course grade drops by one letter grade. Absences are excused with documentation from the Dean of Students.
